SUMMARY

I am a backend-oriented Full Stack Developer with 4+ years of experience developing scalable, production-ready solutions with Node.js (NestJS, Express.js) and Python (Django, DRF, Flask). I have developed monolithic and microservices-based systems with a modular approach, event-driven systems using Kafka, Redis, and Celery, as well as secure webhooks for real-time high-reliability communication between systems. I also optimize databases for performance using PostgreSQL and MySQL, containerize applications with Docker, and create interactive frontends with React.js and Next.js to deliver end-to-end solutions. I am comfortable working in international teams with strong English communication skills. I am very much experienced collaborating with distributed teams and remote workflows.

TECHNICAL SKILLS

Backend Development:

Python (3.x), Django, Django REST Framework (DRF), JavaScript (ES6+), Node.js, Express.js, NestJS, RESTful API Development, Backend Architecture, Microservices

Frontend Development:

React.js (18+), Next.js (15+), JavaScript (ES6+), Redux, Zustand, Frontend Architecture

Databases:

PostgreSQL, MySQL, MongoDB, Relational Database Design, Query Optimization, Indexing

Caching & Messaging:

Redis (Caching, Pub/Sub), Apache Kafka (Event Streaming), Celery (Background Jobs), NATS

ORM & Data Access:

Django ORM, SQLAlchemy, TypeORM

API & Integration:

REST API Design, API Integration, Authentication, Authorization, JWT, Webhooks

Automation & Workflow Tools:

n8n (Workflow Automation, API Orchestration, Webhook Automation, Third-party Integrations, Scheduled Workflows)

DevOps & Deployment:

Docker, CI/CD (GitHub Actions), Linux Deployment, AWS (EC2, S3 – Beginner)

Version Control:

Git, GitHub, Bitbucket

Tools & Environments:

Linux (Ubuntu, Kali), macOS, Bash Scripting

Methodologies:

Agile, Scrum, Kanban

EXPERIENCE:

Reea Digital Limited**1/12/2023 to 31/03/2026**

Software Developer

- **Team Lead | Django, DRF, PostgreSQL, Redis, Celery, Docker:** Led end-to-end development of a scalable multi-tenant SaaS platform, delivering CRM, appointment scheduling, invoicing, payments, notifications, and analytics modules for service-based businesses. Designed system architecture using a modular monolithic approach with Django and DRF, applying Service + Selector pattern, clean architecture principles, and secure multi-tenancy with data isolation. Engineered a high-performance booking system with slot availability algorithms, concurrency handling, and conflict prevention. Developed full-stack features including REST APIs, business logic, and responsive frontend integrations. Implemented asynchronous processing and distributed task queues using Celery and Redis for notifications, background jobs, and scheduled workflows. Built RBAC-based authorization, reporting dashboards, and audit logging systems for enterprise-grade reliability. Containerized applications with Docker. while leading a team through system design, code reviews, mentoring, and agile delivery
- Designed and developed a Pharmacy Management System using Django (Python) with a modular monolithic architecture and layered Service + Selector pattern. Implemented Pharmacy Portal, User Portal, and Delivery System with WebSocket and Firebase integration for real-time communication and notifications.
- Integrated OpenAI APIs for AI-powered Image processing, data extraction, and backend automation across multiple projects.
- Built a microservices-based CRM Gateway using NestJS (Node.js) and NATS, enabling scalable, event-driven architecture and inter-service communication.
- Developed multiple frontend applications, including Admin Dashboards and Client Portals, using modern JavaScript frameworks (ReactJS, NextJS), focusing on responsive UI, state management, and performance optimization.
- Developed a Hotel Management System as a Full Stack Developer using Express.js, Node.js, and React, implementing RESTful APIs and dynamic user/Admin interfaces.
- Containerized applications using Docker to streamline development, testing, and deployment workflows.
- Utilized PostgreSQL for robust relational database design, query optimization, and data integrity across multiple projects; managed version control and collaborative workflows using Git, and implemented CI/CD pipelines with GitHub Actions for automated testing, build, and deployment processes
- Designed and implemented secure Webhook systems to enable real-time event-driven integrations

between internal services and third-party platforms, including request validation, signature verification, retry mechanisms, and asynchronous processing for reliability and scalability.

Automation Solutionz Ltd

23/01/2022 - 30/11/2023

Jr. Software Developer

- Worked on Python scripting and backend development with Django, including building multiple training projects for QA engineers. Collaborated with senior developers and the QA team to manage complex projects, develop automated test cases using the Zueez Framework, and perform detailed backend development and QA testing. Experienced in web scraping and automation using Selenium, ensuring optimized functionality and usability across systems.

EDUCATION

Rajshahi University of Engineering and Technology

January 2016 – August 2022

Bachelor of Science in Computer Science and Engineering
